

DT-System

★ DT-series

These allow everyone to benefit from a solar powered evacuated tube pool heater.

The manifold is made from stainless steel and water goes directly into the evacuated tubes this means that there is no need for a heat exchanger, the water from the pool can be fed directly through the heater.

By connecting the heater to the outlet side of the standard filtration system, the connections on the manifold are 40mm, the system does not require its own pump or controller.

The collectors come in 18, 24 and 30 tubes giving approx 1.5 and 2.0 square meters of collector area, and can easily be linked together in series

The collectors can be supplied with an "A" Frame for flat base mounting.

The heaters are simple to assemble and connect and are ideal for the D.I.Y. installer.
